DATE: July . 2023   **Total Marks (30)**

During the semester , together with your group members you have been working on a small project as part of the HCI course:

    i).   Briefly describe your project scenario, context, and your proposed solution

    ii).   Briefly describe the intended users of your application , their needs/goals

    iii).   Demo : demonstrate your Prototype (Prototype V1)   [15 Marks]

        Describe your prototype in detail ; Your prototype will be evaluated based on how well it captures the relevant project goals and on the following aspects [Visual design, Content ,Interactivity].

    iv).   What design considerations did you take to make your application/system usable for the user(s) described in ii) . In your answer refer to design principles [5 Marks]

        For example, if the designed application's/ website targets older adults (seniors), describe the major design choices taken into consideration to make the system/application usable for older adults (seniors)

    v).   Describe the evaluation process and the evaluation goals for the designed prototype / application/system (justify your techniques) [8 Marks]

        Refer to the evaluation techniques

    vi).   Did you take any design considerations to ensure accessibility of the designed application/system ? [2 Marks]

        To answer this question consider designing for people with:
- *Visual disabilities*
- *Hearing Impairments*
- *Physical disabilities – problems with I/O; for people with motor impairments*
